

## Practice Activity Number 5

Let's practice making a new class.

1. Please make a new class called Mammal.
2. Add a Property in the Mammal class called NameOfMammal, which stores a String.
3. In the Main sub procedure, create 2 new variables based on this class, called FirstMammal and SecondMammal, and add the names of these Mammals. The name for the FirstMammal is "Lion", and the SecondMammal is "Kitten".
4. Output the names of these Mammals.
5. Add a Function in the Mammal class called SoundOfMammal.
  - If the NameOfMammal is "Lion", then it should return "Roar",
  - If the NameOfMammal is "Dog", then it should return "Bark",
  - Otherwise it should return "Noise".
6. Output the noises of these Mammals.

Keep the code for this Practice Activity - we will use it in the next Practice Activity.
