

Practice Activity Number 14 - SELECT and FROM clauses

Let's have a go with your first Practice Activity.

1. Can you write a query which gives the result of 11 multiplied by 12. The column name for this query should be MyAnswer. (And then run this query.)
2. Can you change the query so that the column name is My Answer (with a space in it).
3. There is a table in SSMS called sys.columns. Can you write a query which retrieves all columns from this table.
4. Now can you change it so that it retrieves the columns object_id and name and column_id, and change the columns names to ObjectID, ObjectName and ColumnID.

Good luck!
