

## Practice Activity Number 16 - The HAVING and ORDER BY clauses

Let's expand on our previous query, which was:

```
SELECT object_ID AS ObjectID, COUNT(*) AS NumberOfRows
FROM sys.columns
GROUP BY object_ID
```

1. Can you restrict this query so that it only shows the rows where the NumberOfRows is at least 10.
2. Can you then sort it by the second column, so that the highest number is at the top of the list, and the small number is at the bottom. Where there are any ties, then sort it by the first column in ascending order.
