Can you either create a new program, or alter your program from Practice Activity 1, by adding three variables.

One of them should contain the word John.

The second should contain the word Smith.

The third should contain the number 1 (do not use a String variable for this one).

Can this program Output the following (using the variables you have just created):

```
Hello John Smith.
This is my Program Number 1.
```
Then change the variables to contain Mary, Jones and 2. Without any other alterations, the output should now be:

```
Hello Mary Jones.
This is my Program Number 2.
```
